

Lucullus[®] Automation Training

COURSE OVERVIEW

The Lucullus[®] Automation Training program takes experienced users to the next level by going in depth on several advanced features that Lucullus[®] has to offer. The main focus will be on optimizing work flows through process automation. Like the Basic Lucullus[®] Training, the Lucullus[®] Automation Training combines various means of training people to achieve an optimal result: theoretical training (demonstrations), personal interaction with the experienced trainers and practical training in the form of exercises and access to state of the art Online content.

KEY TAKEAWAYS

Creating instruction sequences for simple or complex processes and using them repeatedly within multiple processes

Integrating sequential calculations in your instructions based on time and / or process related events

Managing interactions between the operator and Lucullus[®] in a user-friendly manner

Receiving notifications, emails or SMS alarms in case critical process parameters deviate from your predefined limits

KEY TOPICS

Advanced configuration: creating more complex bioreactor systems, creating and modifying devices, sub-devices, ports, phases, units, attributes

Process automation: using Logical Devices, the System Device, programming algorithms using Steps and Transitions, configuring alarms, defining Attribute and Value sets

Testing complex Operations: syntax error check, monitoring calculated parameters in tables, graphs and the port control table, troubleshooting Step Chains

THE COURSE INCLUDES

Online access to all theoretical material used during the course

Certificate of attendance

Dinner (only for the in-house option)

COURSE TYPE	NO. OF ATTENDEES	DURATION	PRICE
online	no limit	2 days	€ 1'500 / person
in-house	3 - 9	2 days	€ 2'000 / person *

* excluding cost of hotel and transportation
